

New Mexico Dropout Rates

New Mexico dropout rate measures the proportion of students who drop out in a single year without completing high school. This rate is important because it reveals how many students leave school each year and how each year's rates compare with previous ones.

Example: In October of this school year, 100 students were enrolled in a certain school; during the year, ten students dropped out. The dropout rate is calculated by dividing the number of dropouts by the membership. Thus, the dropout rate for this example is computed as follows:

$$\frac{\text{Dropouts}}{\text{Membership}} = \frac{10}{100} = 10.0\%$$

2003-2004 Dropout Rates per District
